PROFILE

Frontend / OTT Developer with 5 years of experience building Smart TV, OTT and web applications for Samsung Tizen, LG webOS, Hisense VIDAA, Philips Titan OS and browser-based environments. Strong background in LightningJS, TypeScript and React, with a focus on performant TV interfaces, playback-related features, API integration and reliable user experience on constrained devices. Experienced in developing production streaming applications across Live TV, VOD, catch-up/DVR, EPG, authentication and player-driven UI flows. Known for strong ownership, debugging skills, code review, collaboration with QA/backend teams and the ability to lead Smart TV feature delivery from implementation to release validation.

CORE SKILLS

LightningJS(v2, v3) · React · TypeScript · JavaScript · Redux · Smart TV / OTT · DRM concepts · Shaka Player · Video.js · hls.js · EPG · VOD / Live TV · REST APIs · Axios · Vite · Git · GitLab · Bitbucket · Jira · Agile/Scrum · Figma · Postman · AI-assisted coding

WORK EXPERIENCE

Shindiri Studio

Frontend / OTT Developer

2022 - Present

Redstrim OTT Platform - Smart TV Application *April 2026 – Present*

Team Lead / Smart TV Developer

- Organized the Smart TV development team, coordinated tasks, reviewed code and supported project planning/delivery.
- Built modern OTT flows for browse, movies, series, detail, login, settings, EPG, VOD and Live playback.
- Implemented API failover, QR/manual login, authenticated sessions, device key mapping and performance-focused UI components.
- Developed VOD/Live playback UI behavior: channel info, progress handling, Back to Live, audio/subtitle modals and loading states.
- Maintained code quality through reviews, feature coordination and technical decision-making across the project.

Tech stack: LightningJS 3 (Blits), TypeScript, Vite, Shaka Player, Axios, REST APIs

Vodafone Smart TV - Streaming Platform *October 2024 – March 2026*

Smart TV Developer

- Contributed to the official Vodafone TV Smart TV application targeting LG, Hisense and Samsung devices.
- Built and maintained OTT features across Live TV, catch-up/DVR flows, EPG, channel navigation, detail pages and player-driven UI states.
- Worked close to the player layer, including Nagra Player integration, audio/subtitle track handling, playback events and UI synchronization.
- Implemented and maintained TV device/system information features, including native platform data retrieval, system information display, refresh/update handling and device-specific UI behavior.
- Collaborated with QA, backend/API teams and distributed engineers through sprint delivery, debugging, code review and release validation.

Tech stack: LightningJS 2, TypeScript, Redux, Nagra Player, DRM concepts, Vite, Jira, Bitbucket

Zeem TV / Summer TV / Genius TV - VOD & Live TV Platform *January 2024 – October 2024*

Smart TV Developer | Samsung Tizen / LG webOS

- Independently developed Zeem TV and its Samsung/LG reskin apps, Summer TV and Genius TV, on the same VOD & Live TV platform.
- Built VOD and Live TV flows with localized content, dynamic APIs and TV-focused interface components.
- Integrated Video.js/VHS to improve adaptive HLS playback and troubleshoot codec compatibility issues.
- Optimized readability, navigation and playback transitions for constrained Smart TV hardware.

Tech stack: LightningJS 2, TypeScript, Axios, Video.js/VHS, Samsung Tizen, LG webOS

Living Scriptures - VOD Streaming Platform *March 2023 – December 2023*

- Developed data-driven browse templates, metadata-driven UI states and trailer preview modules for streaming content.
- Worked on HLS playback behavior, subtitle/audio fallback logic and custom player controls for multilingual streams.
- Implemented profile-related features, including user login, profile selection, profile editing and profile deletion flows.
- Focused on TV navigation, low memory overhead and stable interaction patterns for hardware-constrained devices.

Tech stack: LightningJS 2, TypeScript, hls.js, Axios, React Query

Timer *December 2022 – March 2023*

- Developed a TV-friendly productivity app for LG Smart TVs with time tracking, audio-visual notifications and remote navigation.
- Built timer, notification and interaction flows optimized for long-running usage on TV devices.
- Implemented spatial navigation and lightweight rendering for stable performance on hardware-constrained Smart TVs.
- Structured the app with modular React components, reusable logic and maintainable state/data handling.
- First OTT/Smart TV project, building practical experience with platform-specific UX and TV app delivery.

Tech stack: React, TypeScript, Tailwind CSS, React Spatial Navigation, React Query

Freelance

2021 - 2022

Frontend Web Developer

Landing Pages / Small Business Websites / Frontend Web Applications

- Built responsive landing pages and small business websites for regional clients, focusing on clean visual presentation, mobile-friendly layouts and practical user flows.
- Developed frontend web applications with reusable UI components, maintainable structure and client-specific design requirements.
- Implemented interactive website sections, forms, API-based data fetching and dynamic UI behavior.
- Worked directly with clients to understand requirements, deliver updates and adjust UI details based on feedback.

Tech stack: HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, Bootstrap, Axios

EDUCATION

College of Applied Technical Sciences - Electrical and Computer Engineer | 2018 - 2021

Electrotechnical School Nikola Tesla – Niš - Computer Technician | 2014 - 2018

LANGUAGES

Serbian - Native | English - B2
